

A mother runs into the emergency department with a toddler in her arms and tells the nurse that her child got into some of the child's clothes. After ensuring the airway is patent, what action should the nurse implement first?

- A Assess child for altered sensorium.
- B Determine type of chemical exposure.
- C Obtain equipment for gastric lavage.
- D Call poison control emergency number.

Which conditions are most likely to respond to treatment with antihistamines? (Select all that apply.)

- A Bronchitis.
- B Allergic rhinitis.
- C Otitis media.
- D Contact dermatitis.
- E Myocarditis.
